Our Projects

Contact Details

Al Gafry Consulting Architects Engineers was founded in 2006 consisting of a team of highly qualified Architects, Engineers, Construction Inspectors and Support Personnel; whose primary goal is to provide our client with the Highest Quality of Design.

We at Al Gafry understand our client as we try to make our design ideas tangible in distinctive places and create unique designs which are both economical and sustainable. We are providing clients the best service achievable, not only from a design perspective, but also in keeping clients involved in our projects to ensure client satisfaction and gain client loyalty.

Al Gafry has become one of the most accomplished multi-disciplinary practice rendering architectural and engineering services in the region with a diverse portfolio spanning all types of developments. We work together as a team who share their ideas and bring new ideas to the table every time.

There has been an acceptance by clients to embrace new trends in contemporary architecture that has afforded AL Gafry the opportunity to explore more sophisticated architectural and engineering solutions to design challenges.

Design Philosophy

Algafrý has been built around the idea of keeping our clients involved, allowing a “hands on” approach for our clients. We improve and amplify your every design idea and requirement, in a wide range of architectural styles, at the intersection of beauty and safety.

Our ability to discover inherent order among these complex components enables us to create projects tailored to their unique environments for our clients. Our process is not formed by any one style or predetermined formula, but rather strives to create architectural that is inventive yet timeless. All are team members are personally involved in every project to contribute their individual strengths and expertise.

Our team of highly knowledgeable MEP and Structural Engineers, can advise and recommend highly-efficient system that meets client requirements.

Our strength comes from a wide range of in-house expertise that includes Architects, Structural and Civil Engineers, MEP Engineers and Interior Designers. Together we offer one-stop service package from Planning to Design Construction.

Each project begins with a collaborative approach, which engages the client in an integrated design process from the initial concept through the project’s completion. We continue this approach in the project’s execution as we endeavour to translate concept into the craft of construction. Our goal is to create projects with truly inspired designs.

The design and management of all projects, regardless of scale complexity or building typology is approached on the same basis legibility being driving force.

As professionals we have a dual responsibility firstly to our clients we serve, but also to the public domain who ultimately become the many users of our design. The design of each new project is reviewed regularly, both formally and informally, so as to meet the project initial objectives.
