

GODWIN AUSTEN JOHNSON

COMPANY PROFILE

01

Who we are

WE ARE – MULTI-DISCIPLINARY

We are a fully integrated multi-discipline Lead Design Consultant offering in-house expertise in Master Planning, Architecture, Infra-Structure planning, Building Services (MEP), Interior Design and Specialist Lighting, while sub-contracting other disciplines and specialist services as and when required. Our multi-faceted team of more than 110 talented individuals contribute to a culmination of unique and specialist skills covering the full range of services from project inception to construction completion including the formulation of the client's brief when required.

WE ARE REPRESENTED IN THE MIDDLE EAST AND AFRICA – DUBAI OFFICE

Brian Johnson has been practising architecture in the Gulf region since 1975 and currently employs a team of 110. He founded GAJ UK in 1989 and the Dubai office was opened as a branch of the UK office in 1991. Throughout our history, which spans more than 30 years, we have created some of Dubai's most iconic buildings and have helped define the emirate as we know it today.

WE ARE INTERNATIONAL

GAJ UK was established in 1989 as Godwin Austen Johnson. However our lineage of partnerships harks back to 1847 with a corporate archive of landmark British architecture throughout the industrial and modern ages. The practice is headed by Brian Johnson, Principal and Managing Partner who has more than 45 years of international and regional experience. With projects in the UK, across the Middle East, India and Africa our approach is truly global, testing our flexibility and our local market knowledge. We work closely with our clients to achieve a detailed and thorough understanding of key areas such as history, society, culture, technology and functionality of the projects.

WE ARE EXPERIENCED

Our passion and expertise is not only evident in every project we work on but is also celebrated in the awards we win as reflected in the substantial media coverage we receive for both the practice as a whole and for our talented colleagues as individuals. We are frequently asked to speak at industry events and to join judging panels. Our integrated multi-discipline approach to design continues to attract new business opportunities from across the region and stems from our fundamental belief that architecture should not only be contextually relevant but also rooted firmly in principles of sustainability.

What we do

■ HOSPITALITY

■ EDUCATION

■ RESIDENTIAL

■ COMMERCIAL

■ SPORTS AND LEISURE

■ MASTERPLANNING

Architecture

We create experiences, not just buildings.

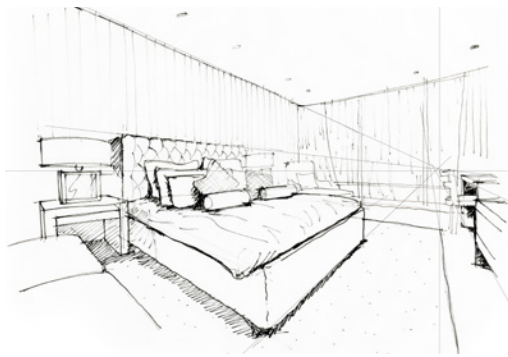

Headquartered in Dubai since 1991, we have been responsible for creating some of the Emirates' most iconic buildings and spaces.

We work closely with our clients to achieve a detailed and thorough understanding of key areas such as history, society, culture, technology and functionality of the projects.

We also pride ourselves on forming and maintaining strong and respectful relationships with subcontractors, all of whom have a common goal to meet, exceed and deliver on our client's vision.

An award winning and multi-disciplinary firm, GAJ has particular expertise in hospitality, residential and commercial, education, sport and leisure design as well as master planning, mixed use, public sector, institutional and cultural projects.

GAJ is committed to the belief that the quality of the built environment is an essential part of the economic and cultural fabric of society, in which the very best architecture plays a central and intrinsic role.

Interior design

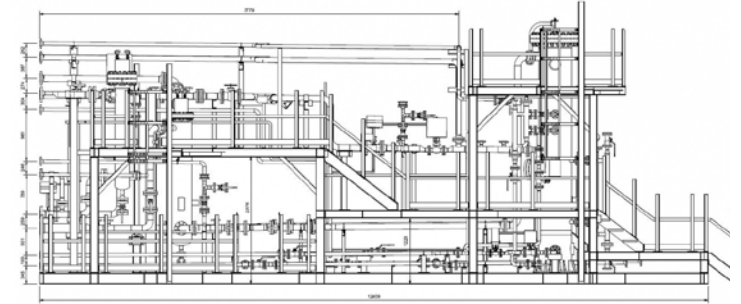

We are creative designers who bring our global experiences to each and every project.

At GAJ we thrive on team collaboration which is achieved through an open and communicative work environment. We believe in creating memorable spaces and lasting experiences. Our aim is to take the client with us on a journey of conceptual development, involving all relevant stakeholders towards the successful management and execution of our designs.

Our projects push the boundaries to create relevant and appealing spaces and the team uses a bespoke approach research and integration of their individual skills to bring a wealth of knowledge and passion into each project regardless of size.

Our interiors team are a collective team of individuals from different backgrounds and cultures all of whom bring something unique to projects. We learn from past experiences and grow from each other's brilliant ideas and inspirational insights.

Most importantly we love to see our details and designs develop into reality.

MEP

The speed of change through technological advance is scarcely believable

We firmly believe in the evolution of engineering and with that comes the need for our engineers to evolve with it. It is not all technology based however and practical experience is equally as important as an engineering model. We ensure that all members of our team are involved in visiting our projects on site.

Collectively we work together to embrace technological advances bringing insight from our various nationalities, experiences, education and personal interests to today's engineering world. This is only possible in a highly communicative environment where people are encouraged to for relationships and work closely with others.

We all like different things and have different interests; the key is taking the best bits and relating it back to the science of engineering. Whether we learn from the man holding the hammer or the person occupying the space after completion it is important that we learn from what we did do well, what could be done better, and how we could make it easier in future using the technology we have at our fingertips.

Design methodology and approach

Methodology:

- GAJ follows the basis of the RIBA work plan in terms of Design Stages for project inception to construction completion Stages A to J.

Design Management

- At project onset, a Design Management Plan is circulated to the project design team, setting out the design process, design reviews, templates and formats to be used for the various project deliverables.

Design Change Management

- During Concept design stage, the client have a right and the consultant team are oblige to accommodate change deemed necessary to the benefit of the project and it feasibility, be it through client / operator requirements or VE at end of Concept stage.
 - These changes are limited to the overall Design Brief, area schedule and area programme
 - The consultant will issue a reverse brief
- During Schematic Design stage, the client has a right to review and initiate planning changes in keeping with the reverse brief.
 - Changes to overall area schedule and area programme is not foreseen at this stage
- During Detail design, changes are limited to the overall technical detail and specification in order to achieve the approved Concept and project budget
- Throughout all design stage, changes are tracked and notified (with or without cost / time implications) by means of Confirmation of Client Instruction (CCI)
 - No changes are incorporated into the design without the client's written consent
 - A design change tracker is maintained and issued to the client as and when necessary

Key Deliverables:

- At project onset, the client is provided with a set of generic deliverables for each stage and related to each design discipline.
- At the onset of each design stage, the client is provided with a detailed list of deliverables relevant to each design discipline.

- At the end of each design stage, a deliverables compliance checklist is provided to the client for deliverable audit purposes, if required.

Project Specific Risks:

- Project Risk
 - At the end of each design stage, a Project Risk Register is provided highlighting Risks identified, measures applied to mitigate these risks and recommendations for further mitigation where necessary.

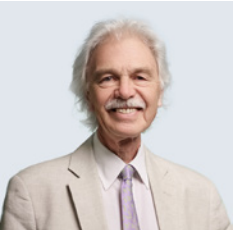

Local Authority Approvals

- At project onset an Authority Approval Tracker is provided including all NOC's, Approvals and Permits deemed applicable to the project, including the various authorities involved.
- At the beginning of each design stage, a programme is provided with milestone deliverables required and related to the particular design stage
- Authority procedures are planned into the overall design programme

Design to Budget:

- At project onset and as part of the client's design brief, the client shall provide the basis (area schedule) and aspired project budget
 - As part of the Pre-Concept (RIBA stage 0 -1) the Cost Consultant will endeavour to validate the client's budget against the client's brief
 - Applying the appropriate benchmark comparison (with similar schools in the market) is key to this stage.
- At end of Concept stage
 - The Cost Consultant shall provide an estimated cost of the proposed Concept design and a comparison (with recommendations to achieve budget) against the validated budget
- At end of Schematic Design stage
 - The Cost Consultant will provide an Elemental Cost Plan, identifying areas of concern for further VE or cost saving as necessary.
- Prior to commencing Detail Design and project specification, key cost drivers are identified for the appropriateness of the materials being specified against budget compliance.

Brian Johnson
Managing Partner

Brian Johnson is the Principal and Managing Partner of Godwin Austen Johnson (GAJ).

He began his career in London in 1973 and in 1975 he moved to Dubai where he worked for a small firm for a few months before the principal announced that he was leaving Dubai resulting in him asking his old partner to join him in the establishment of a new practice in Dubai. Brian was Managing Partner of this practice until 1989 when he left to join the long-established UK practice: Godwin Austen Johnson.

Brian has maintained an almost constant presence in the Gulf region since 1975 and in 1989 he opened the GAJ headquarters in Dubai.

With more than 40 years of regional experience to his name, Brian's influence on modern Middle Eastern architecture is undeniable. His body of work comprises some of the region's most recognisable and prized buildings. Among them is the Dubai Creek Golf Club, widely recognised as one of Dubai's first architectural icons – so much so that it features on the 20 dirham note. Recognised as one of the most distinguished architects in the region, Brian is credited with having set in motion a countrywide trend in the U.A.E. to incorporate traditional Arabic and Islamic themes into modern architecture.

His distinctive style and uncompromising resolve for design excellence has made Brian and GAJ a preferred partner for many distinguished projects and has resulted in the firm winning an array of architectural awards.

NATIONALITY

Jason Burnside

Partner (Design Director)

A highly successful and well-respected architect, Jason graduated from the University of Dundee in 1996 and spent five years with a small urban design practice in London before moving to Dubai to join GAJ in 2001.

He was made a partner is 2008 and as a team leader he aims to deliver holistic projects that are highly functional, energy efficient and engaging.

Jason is a well-rounded architect with experience in many different sectors from residential and hospitality to leisure and mixed-use projects. He also has considerable experience in the education sector and has led the design of more than 20 schools in the region.

As an expert in his field Jason is also highly sought after as a speaker and can regularly be found on the stage at industry events such as The Big 5 and Cityscape Global. He has also been invited as a judge for a number of awards events including the MEED Projects Awards each year.

Jason's desire to create great architecture is clear to see within his vast experience which ranges from concept through to award-winning built projects and, as one of the longest-serving architects in the firm, he has designed and delivered some of GAJ's high profile projects including Serenia Residences on The Palm Jumeirah, The Arcadia School's secondary campus in Dubai, The Gate Village DIFC in partnership with Hopkins & Partners; and the Federal National Council in partnership with Ehrlich Architects.

KEY PROJECTS

Residential

- Serenia Residences, The Palm Jumeirah, Dubai U.A.E.

Ricus Van Zyl

Partner

Ricus brings to GAJ more than 20 years’ design experience with particular expertise in healthcare, education, retail and leisure facilities. The South African architect began his career in Namibia where he led the design of some of the largest private hospital and education institutions in the country. Ricus moved to Dubai in 2004 and joined GAJ as a site architect for the firm’s flagship Bab Al Shams resort where his exceptional onsite management saw the project completed and delivered in just 13 months. Ricus is a key player in the firm responsible for the effective management and delivery of projects as well as overseeing the RFPs and bidding process. He has a natural feel for the built project, but more importantly he has an innate understanding of what it takes to get the job done.

Alaa Abdel Mohsen Abdel Kreem Sayed

Partner - MEP

Alaa is an MEP professional with twenty years’ experience in the leadership, design and delivery of MEP services on a wide range of projects. After obtaining his Bachelor’s Degree in Electrical Engineering, Alaa began his engineering career in Saudi Arabia and Egypt where he gained experience on a wide range of prestigious projects including the major CityStars hospitality development in Sharm El Sheikh, Fairmont Heliopolis and Jolie Ville, Luxor.

Alaa gained further experience in the design and application of MEP services in Saudi Arabia and the U.A.E., on projects such as Khalifa University, Vida Retail & Serviced Apartment, Jumeirah Al Wathba Desert Resort & Spa and Al Fahd Resort, continually honing and developing his management, delivery and design skills.

On joining the GAJ team in 2017 as an Associate Partner and key senior member of the practice, Alaa’s main responsibilities included the management and delivery of all MEP post-contract services and the management of the MEP delivery team. He has led the team in the technical delivery of a number of highly complex and challenging projects in a range of end market sectors including hospitality and education.

In recognition of his skills and dedication, Alaa was promoted to Partner in 2019. He continues to lead the MEP team and currently manages the delivery of complex design projects with the in-house team, from inception to tender stage. In addition, Alaa has retained responsibility for the management of the MEP post contract services team, who manage and oversee the delivery of MEP projects from contract award through to client handover.

Alaa has a proven track record in delivering MEP pre and post contract services for mixed use developments, complex hospitality developments, education facilities, healthcare, retail and utilities projects. He takes personal pride in ensuring that the teams deliver services to the required standards, quality and within the required timeframes.

Alaa’s proactive nature, his ability to analyse complex situations and his excellent communication, management and delivery skills are attributes that are highly valued within GAJ and within the wider client delivery teams.
